Professional Summary

- Full-stack Software Engineer with 7+ years of experience building scalable web applications using Ruby on Rails, JavaScript, React, and Next.js.
- Proven ability to deliver reliable, test-driven code in Agile/Scrum environments with a focus on continuous delivery.
- Experienced across the full software development lifecycle; from RESTful API design and database architecture to front-end performance optimization and cloud deployment on AWS and Azure.
- Strong collaborator with a track record of code reviews, cross-functional teamwork, and measurable quality improvements.

Skills

Languages: Ruby, JavaScript, C#, TypeScript, Python, HTML, CSS, SQL
Frameworks & Libraries: Ruby on Rails, React, Next.js, Node.js, Tailwind CSS, StimulusJS, HAML, ERB, SASS/BEM, D3.js, ActiveRecord, ASP.NET, Django
Databases: PostgreSQL (Postgres), MySQL, Microsoft SQL Server, Redis, NoSQL, MongoDB
Testing: RSpec, Test-Driven Development (TDD), Vitest, Jest
Cloud & DevOps: AWS (Lambda, ECS), Docker, Heroku, Azure CI/CD Pipelines
Tools & Practices: Git, GitHub, Agile/Scrum, Kanban, Code Review, RESTful APIs, Microservices, OOP, Unix/Linux, Visual Studio Code (VS Code), Claude, AI-Assisted Development, Debugging

Work Experience

Full-Stack Software Engineer | Ruby on Rails Developer
American Financing Corporation | Jan 2026 – Present

- Designing and maintaining both public-facing and internal Ruby on Rails and React/TypeScript, Next.js, Tailwind, full-stack applications supporting mortgage operations for an Inc. 5000 top-50 company
- Developing a greenfield borrower portal using React, TypeScript, Ruby on Rails, MongoDB NoSQL delivering an improved end-to-end loan application experience for customers
- Building a greenfield leads management application to streamline lead capture and routing workflows for sales teams
- Implementing Generative Engine Optimization (GEO) and Search Engine Optimization (SEO) improvements across web properties to increase organic traffic and improve regional search visibility with Google Tag Management integration
- Accelerating development velocity by integrating AI-assisted workflows using Claude Code, reducing iteration time and improving code quality
- Developing internal marketing tooling features using Ruby on Rails and SQL to support campaign tracking and operational reporting
- Increasing test coverage from approximately 65% to 94% by writing comprehensive RSpec unit and integration tests, significantly improving system reliability and quality

Technology Specialist
Arapahoe Libraries | Oct 2025 – Jan 2026

- Provided community digital services and technology support while maintaining active professional development in software engineering
- Designed, automated, and launched a workflow for standardized communication with patrons at scale

Professional Development - AI & Software Engineering
Self-Directed | Sep 2024 - Oct 2025
- Completed “Building AI Agents: Advanced Topics for Developers”
- Completed “Hands-on AI: Building AI Agents with MCP”
- Completed “Build AI Agents and Automate Workflow with n8n”
- Completed “Machine Learning With Python”
- Studied Clean Code (Robert C. Martin)
- Studied Design Patterns (Gamma, Helm, Johnson, Vlissides)

Software Engineer
Verisys Corporation | Sep 2023 – Sep 2024
- Created, maintained, and enhanced Ruby on Rails API microservices supporting credentialing, monitoring, and data services for 400+ healthcare organizations
- Developed and optimized ActiveRecord and PostgreSQL database migrations, stored procedures, and table triggers to support complex data workflows
- Implemented AWS Lambda functions to handle asynchronous data processing and reduce load on core application services
- Supported AWS infrastructure including application monitoring, product deployments, and service health across cloud environments
- Collaborated with engineers and stakeholders in Scrum/Agile ceremonies to define tasks, deliver incremental functionality, and maintain software engineering best practices
- Participated in code reviews, providing constructive feedback and contributing to team knowledge sharing

Software Engineer
MediaNews Group | Mar 2023 – Sep 2023
- Built and maintained RESTful APIs on a cross-functional Agile team with a continuous delivery focus for digital subscription and user authorization platforms
- Integrated third-party subscription platforms to support revenue growth across local news organizations
- Developed application features using Ruby on Rails, JavaScript, and WordPress with a focus on front-end performance optimization and DOM manipulation
- Leveraged PostgreSQL and Ruby scripting to integrate user accounts from one database to another ensuring account consistency
- Collaborated with product owners, scrum masters, and offshore engineering teams to translate business requirements into production-ready code

Software Engineer
American Financing | May 2021 – Nov 2022
- Designed and developed Ruby on Rails web applications, RESTful APIs, C#/.NET applications, and internal reporting tools supporting mortgage operations for an Inc. 5000 top-50 company
- Built front-end dockerized web interfaces using React, JavaScript, HTML, HAML, and CSS/SASS, implementing UI/UX improvements aligned with business requirements
- Set up RESTful API authentication and secure web application integrations following web security best practices

- Used D3.js alongside SQL stored procedures and database updates to build interactive data visualizations for internal operational reporting
- Built and maintained internal tooling that monitored workflows and served 125+ users, improving team efficiency and reducing manual processes
- Provided revenue reporting metrics tracking millions of dollars in closed loan volume using ActiveRecord and PostgreSQL queries
- Collaborated with production, marketing, and sales teams on QA and release of software products

Software Engineer
AlsoEnergy | Apr 2019 – May 2021
- Developed company public-facing applications using JavaScript and React supporting web and data service delivery
- Deployed RESTful API endpoints with Node.js, C# and .NET, to serve data to front-end applications and external consumers
- Implemented designs in both graphical and tabular formats using JavaScript and front-end libraries
- Contributed to cloud infrastructure and deployment pipelines, improving application reliability and delivery cadence

Education

Certificate in Backend Software Design and Development
Turing School of Software and Design | Jan 2019

Bachelor of Arts — International Studies
University of Northern Colorado | May 2010

Bachelor of Arts — Spanish
University of Northern Colorado | May 2010
